Why I chose this project ¿¡

Dubai Metro is one of the newest metro systems in the world & is already proving to be one of the lifelines of a truly sprawling commercial city not to mention the glitz and glamour attached to it thus making it a must-see for all tourists. As the Dubai Metro presently covers 47 stations and is slated to be extended even further it is one of the best ways to travel within the city not only for its residents but for tourists as well. The journey commences with buying of a ticket and there are a number of travel cards depending on how much you will travel.

One of the main reasons why I chose this project was because I wanted to challenge myself, since I had to learn extra concepts which I have put into use in this project.

Another reason, was to help loads of tourist coming to Dubai to plan their journey. This saves their time to figure out the information required for their journey that is cost of each journey, next train's time, number of stations and interchange of stations (when required) .

Manual v/s Computer

In the present world, we can't imagine to live without computers, such is our dependence on these electronic equipment's. Over these years, they have truly evolved not just as an electrical equipment, but our life partners.

Regarding travel planner, a computer program is far more efficient. Not only does a travel planner program save a lot of time, but saves a lot of work in gathering information from different places, which can be really frustrating at times.

Thus, manual search of information is not only tough, but also is not so smart in the present world.

Thus, it is clearly evident that a computer travel planner management program is way more efficient.

System Requirements & Installation Manual

## System Requirements:
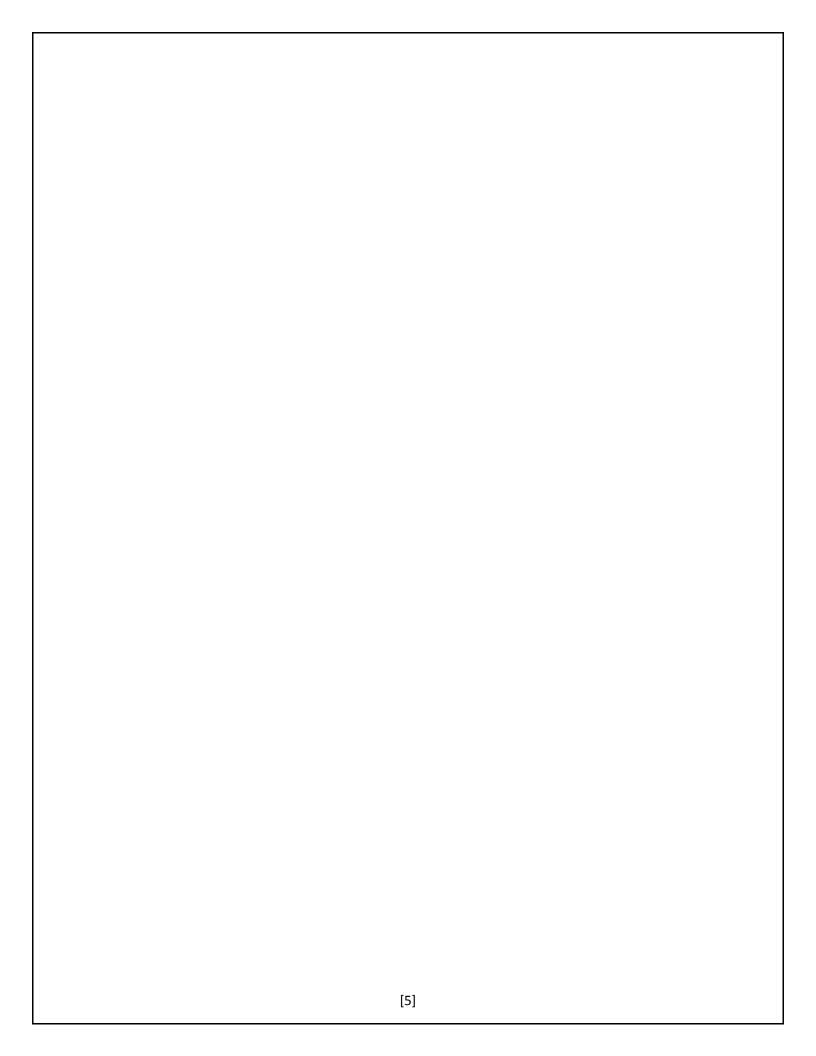

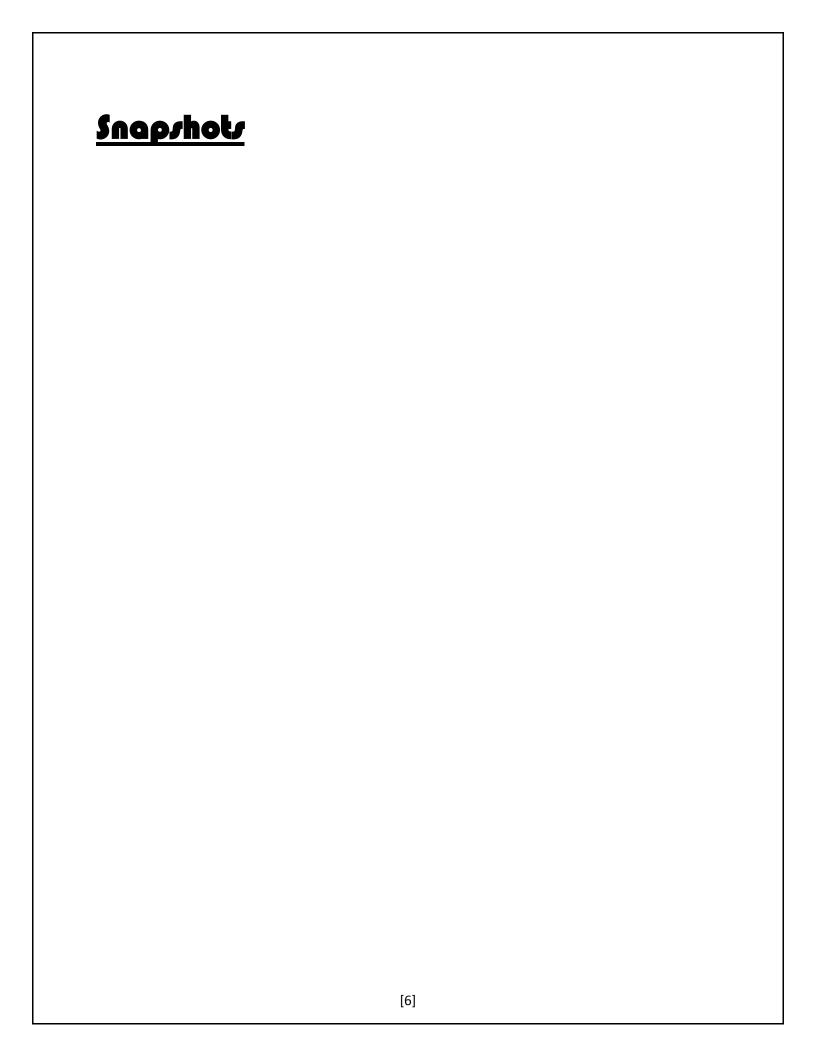

- Windows (XP or later)/Mac (OS X or later)/Linux/Unix.
- Intel 64(AMD64/X86-64 binary) or higher.
- 1.86 GHz or more.
- Minimum 4GB Hard Drive Size (Recommended 10GB).
- 30 MB free space on hard drive.
- 2 GB RAM
- Graphic Card(Memory Clock Rate – 900-5700 MHz & Bandwidth – 80-230 GB/s)

Installation Manual:

- ✓ Double click on the file (DubaiMetro) to start the program.

Bugs Encountered

Initially there was error when starting station was Burjuman and destination station was Union Square and vice versa.

This bug was fixed by placing a separate if statement when starting stations were Burjuman or Union Square and destination stations was Union Square or Burjuman.

In IDLE, feeder buses were also printed but there was an error when the program was changed to direct GUI so the feeder buses were removed.

Future Modifications

First the program was coded to be executed in IDLE but latter on changes were made to run in directly GUI.

Dimensions of the Application Frame were changed according to need.

When the program was coded to be executed directly in GUI feeder buses were removed as there was an error which stops the program from starting directly in GUI.
